Project Overview:

Idea:

The goal of this project is to develop an app that offers personalized workout plans and enables users to track their intake of calories, protein, carbohydrates, and fats. Every year, millions of people set goals to improve their health by losing weight or gaining strength, yet many struggle due to limited guidance, time constraints, or both. Our app addresses these challenges by providing flexible workout routines that users can follow at their own pace, ensuring they have the support needed to achieve their fitness objectives.

Potential Users:

- Fitness beginner
- Dedicated Gym Enthusiast
- Someone getting back into the gym
- Busy Person

See next page

Fitness Beginner Persona:

Demographic Information:

- ➔ **Age Range:** 20-30yr old
- ➔ **Name:** Alex Pereira
- ➔ **Gender:** Male

Context & Background:

- ➔ **Background:**

Alex has just finished school and is now attending University. Alex has a busy schedule however, he still wants to make a change in his life. Alex has never touched weights before in his life. And Alex is eager to learn the basics and making sure he does not hurt himself in the process
- ➔ **Why Alex wants to go to the gym:**

Alex has always been a tad overweight in whole life but has never considered changing until now. He wants to improve his overall well-being, gain confidence with his shirt off, and he wants to pack on some muscle.

Goals:

- ➔ **Gym goals:** Alex's current main goal in the gym is to learn the basic movements(making sure he does not injure himself), build strength, and create healthy habits that will allow him to live a long healthy life.

Device/Browser:

- ➔ **Device:** Alex currently has an iPhone 16
- ➔ **Browser:** Alex uses safari and google chrome

Dedicated Gym Enthusiast:

Demographic Information:

- ➔ **Age Range:** 40-50 yrs old
- ➔ **Name:** Mitchell Jordan
- ➔ **Gender:** Male

Context & Background:

- ➔ **Background:**
Mitchell has been working out at the gym for 5+ years. Mitchell has amazing knowledge in lifting and nutrition.
- ➔ **Why Mitchell wants to go to the gym:**
Mitchell wants to attend the gym because it makes him happy. It's a place that is judgement free, he has a passion for body building, and he wants to live a strong healthy life.

Goals:

- ➔ **Gym goals:** Mitchell wants to make sure he uses the most optimal lifting strategies and continue to improve his fitness metrics.

Device/Browser:

- ➔ **Device:** Mitchell has a Samsung s24
- ➔ **Browser:** Alex uses google as his main browser.

Someone getting back into the gym:

Demographic Information:

- ➔ **Age Range:** 30-40 yrs old
- ➔ **Name:** Samantha Johnson
- ➔ **Gender:** Female
- ➔

Context & Background:

- ➔ **Background:**

Samantha has played sports and went to the gym her whole life but has quit all activity due to her kids being young and not having enough time. Now that her children are older, and she has a more flexible schedule she is really motivated to get back into the gym.
- ➔ **Why Samantha wants to go to the gym:**

Samantha wants to go back to being the fit mom she use to be. She wants to be strong for her kids and show others than she is a strong woman. Additionally, she wants to be a good role model for her kids showing no matter how busy you can always find time for the things you love.

Goals:

- ➔ **Gym goals:** Samantha wants to go back to living a healthy life style and maybe lose a few pounds while she is at it. However, her main goal is to just get moving again.

Device/Browser:

- ➔ **Device:** Samantha uses an iPhone 12
- ➔ **Browser:** Samantha uses google as her main browser.

Busy Person:

Demographic Information:

- ➔ **Age Range:** 25-35yrs old
- ➔ **Name:** Chris David
- ➔ **Gender:** Male

Context & Background:

- ➔ **Background:**
Chris works as an investment banker and is very busy. Working 80+ hours a week he has very little time to take care of himself. He finds it challenging to find time.
- ➔ **Why Chris wants to go to the gym:**
With his busy lifestyle Chris wants to make sure he focuses on his health and well-being. He knows that sitting in a chair 80+ hours a week is not good for his health so he wants to change that.

Goals:

- ➔ **Gym goals:** Chris wants workouts that do not take too much time but they also effectively work his muscles.

Device/Browser:

- ➔ **Device:** Chris has an iPhone 16 pro max
- ➔ **Browser:** Chris uses Firefox

API's

- USDA FoodData Central API -> Primary
 - o This api will allow us to get food data. This allows use to track all nutrition for the user
- Google Gemini -> Backup
 - o Have a chat bot that the user can ask fitness questions about
- Wger API -> Primary
 - o This API lets us select workouts and customize it to the user's needs.
- Fitbit API -> Backup
 - o If the user wears a fitbit we will be able to get fitness data from it and show the user how much they move per day.

API features + User stories:

- USDA FoodData Central API
 - o 1. Allow the user to log food into there daily calorie intake
 - Alex: I want to quickly log each food item I eat throughout the day so I can track my daily calorie intake and makesure I'm staying within my daily calories budget.
 - o 2. All the user to look at food info before they either eat or buy it
 - Samantha: I want to make sure the food I buy is healthy for me and my kids. That's why is use GitFit's food database to make sure I'm making good choices for me and my family
 - o 3. Food Nutrient Quick Lookup: allow the user to quickly look up if the food will fit into their diet or not
 - Chris: Since I am busy all the time I want to make sure the food I eat fit's my goals and diet without wasting to much time

- Google Gemini
 - 1. Gemini QA chat bot
 - Mitchell: Eventhough I have been lifting for many years I always have questions, and have someone answer those 24/7 will change the way I workout.
 - 2. Quick nutrition tips
 - Alex: As a beginner I want to make sure the choices I make take me toward my goal. Thanks to the chat bot I can make healthy swaps and eat all of my favorite foods.
 - 3. Recipes with the food in my fridge
 - Samantha: With the kids home and me wanting to make a healthy dinner. I just tell the chatbot what's in my fridge and it automatically gives me healthy recipes with a click of a button
- Wger API
 - 1.Exercise Look up
 - Alex: As a fitness newbie I want to make sure I get the most beginner friendly exercises and that take me to my goals
 - 2.Exercise detailed view
 - Mitchell: As an advanced lifter I want to see what specific muscle groups each exercise targets.
 - 3.Workout builder
 - Chris: Due to my limited time I want to build a workout that fits my goals. Thanks to the workout builder I can and am able to build a workout that fits my time frame.

- FitBit Api
 - 1.Daily activity page
 - Samantha: As a mom is constantly juggling multiple tasks a day I want to see how active I really was.
 - 2.Steps count page
 - Mitchell: I try to get at least 10k steps everyday. Thanks to the tracking feature I can easily find all the info I need on one page.
 - 3.Calories burned
 - Chris: With my sedentary lifestyle I want to see how many calories I burned throughout the day. Loading up the GetFit site I can see how many calories I have burned and how many I have eaten.
